ABOUT ME

I have a solid foundation in data analysis using Power BI, statistics, machine learning, and deep learning. I am committed to further enhancing these skills to generate valuable insights that drive organizational success, while continuing to advance my professional career within the company

- Passionate about continuous learning
- Driven and dedicated

EDUCATION

UNIVERSITY

Naresuan University

- Bachelor of Science in Data Science
- Graduated : 2025

HIGH SCHOOL

Phichit pittayakom

- Science Mathematics
- Graduated : 2021

SKILLS

- Python
- Excel (advance)
- Power Bi
- SQL
- R
- Git

WORK EXPERIENCE

- Internship at Naresuan University Hospital, Innovation Development Department / IT Department
- Workshop : Image-Based Deep Learning with Google Co-Lab
- Certificate of Completion : Introduction to Data Studio
- DataCamp Certificate : Introduction to SQL, Intermediate SQL, Understanding Data Science

PROJECT

The Sweetness Prediction of Thong Dee Pomelo Using Transfer Learning for Preprocessed Bottom-View Images (Undergraduate Thesis Project)

- Developed a deep learning model using transfer learning (MobileNet V1-V3) to predict pomelo sweetness from preprocessed bottom-view images
- Achieved up to 86% accuracy, reducing reliance on destructive sampling methods.
- Applied image preprocessing techniques including CLAHE in RGB and CLAHE in Grayscale to enhance feature extraction
- Tools : Python, TensorFlow/Keras, Image Processing

Waste Management App Prototype (Design Thinking Project)

- Designed a mobile application prototype for waste management using the Design Thinking process.
- Focused on user needs, waste separation guidance, and reward system for sustainable behavior.
- Tools used : Figma

Air Pollution Prediction (Data Pipeline Project)

- Built a data pipeline with OpenWeatherMap API to collect and preprocess air quality data
 - Applied data cleaning and transformation; automated pipeline with Apache Airflow
 - Tools : Python, Pandas, Apache Airflow
-
